Tucuman - Argentina

Passionate self-taught and motivated entrepreneur with web development skills. I am currently on the lookout for a position in a company where I can grow in a team environment and where I can meet challenges with creativity and determination.

Work experience

Freelance Fullstack Web Developer.

Experience as a freelance full-stack web developer, working on projects using PHP for backend, Bootstrap for user interface design, and MySQL as a relational database to ensure data integrity and system scalability. Implemented an after-sales template to improve efficiency and end-user experience. I also worked on the development of an e-commerce using JavaScript and React for the frontend, Node.js for the backend, and MongoDB as a non-relational database. Designed and implemented interactive user interfaces to improve the user experience. I have collaborated with other developers in the maintenance and development of websites, both backend and frontend.

Technical support in computer systems

Ministry of Education of Argentina

I supported the computer equipment provided by the Conectar Igualdad Program of the Ministry of Education of the Argentine Nation, and also carried out development tasks in the recruitment of workers.

San Juan- Arg
Sep 22 - Jun 23
